SUMMARY

Senior Frontend Engineer with 7+ years of experience designing scalable frontend systems, leading design system adoption across multiple teams, and modernizing complex applications at scale. Proven track record in architecting reusable component libraries, driving migration strategies, and establishing cross-team engineering standards. Strong background in Angular, TypeScript, and frontend architecture with full-stack exposure in Java, Spring Boot, and Node.js. Based in Dublin with Stamp 1G work authorization.

PROFESSIONAL EXPERIENCE

Full-Stack Developer Angular / Java – JCDecaux

October 2024 – April 2026 | Paris, France

- Architected and led adoption of a reusable frontend design system across 8 teams, standardizing component behavior and reducing duplicated implementation by 40 shared components.
- Established cross-team engineering standards for Angular 17–19 applications, improving code quality and maintainability across 10+ mission-critical enterprise systems.
- Drove incremental Angular 17 to 19 migrations using standalone components, signals, lazy loading, and code splitting, improving frontend performance and developer velocity.
- Led architecture governance and technical decision-making for frontend platforms, collaborating with backend, product, and QA teams to deliver scalable solutions.
- Resolved Angular Material 2 to 3 migration challenges, including change detection optimization and chart redesigns aligned with the new design language.
- Optimized application performance through lazy loading, code splitting, and AOT compilation, reducing initial load times and improving user experience.

Tech Lead / Angular Developer – SFR Business

September 2022 – September 2024 | Paris, France

- Led Angular development for the MYPC platform used by 1,000+ users, modernizing access-right and incident-management workflows into a self-service experience.
- Reduced time to resolution from 2 days to around 12 hours by redesigning key workflows and improving the user interface with a PWA-based approach.
- Led a small team of frontend developers and mentored interns and junior engineers through reviews, technical guidance, and structured collaboration.
- Wrote functional and technical specifications for key features and coordinated delivery with frontend, backend, and product stakeholders.
- Increased automated test coverage from 60% to 70% and enforced code quality with CI/CD, ESLint, SonarQube, Karma, and Jasmine.
- Led the Angular 12 to 17 migration feature by feature while preserving PHP web views during the transition.
- Implemented accessibility improvements (ARIA labels, keyboard navigation) to ensure WCAG 2.1 compliance across key user workflows.

Full-Stack Developer Angular / Java - Node.js – SIFAST

September 2019 – January 2022 | Sfax, Tunisia

- Architected and delivered 5+ enterprise modules for HR and business workflows using Angular 9–12, NGXS/NGRX, OAuth2, Node.js/Express, and Java Spring APIs.
- Migrated the platform to a micro-frontend architecture with Single-SPA, integrating Angular and Vue.js modules to improve modularity and cross-team development.
- Containerized applications with Docker and supported deployments on Kubernetes clusters, improving release consistency and environment portability.
- Collaborated with backend teams to design REST APIs and optimize data fetching strategies for improved application performance.
- Made strategic tradeoffs between monolithic and micro-frontend architectures based on team size, deployment frequency, and scalability requirements.

Angular Developer – Alea-Prevention

May 2020 – July 2020 | Remote (French client)

- Maintained and enhanced a legacy Angular 5 application for health and safety management, resolving production issues and improving platform stability.
- Delivered new functionality to support compliance workflows and increase application value for end users.

Angular Developer – CHO GROUP

October 2019 – April 2020 | Remote

- Built partner access and consumer traceability applications for olive-product batches using IBM Trust Food blockchain, supporting 100+ batches across 5 languages.
- Delivered mobile-first web experiences focused on traceability, usability, and multilingual support.

UI/UX Design Engineer – Cordon Electronics

September 2019 – October 2019 | Remote (French client)

- Designed responsive web, tablet, and mobile mockups in Adobe XD for an e-commerce platform, with templates adopted for a Django-based product.
- Created user flows and interface designs based on brand guidelines and UI research.

CORE SKILLS

Frontend: Angular, TypeScript, RxJS, JavaScript, HTML5, CSS3, Angular Material, Standalone Components, Signals, Lazy Loading, Code Splitting

Architecture & State: Design Systems, Component Libraries, Micro-frontends, NGXS, NGRX, Single-SPA

Backend: Java 8/17, Spring Boot, Spring Core, Spring Data, Node.js, REST APIs

Quality & Delivery: Testing, Code Review, Mentoring, Agile/Scrum, CI/CD, ESLint, SonarQube, Karma, Jasmine, AI Assisted Development, GitHub Copilot

DevOps & Tools: Docker, Kubernetes, GitLab CI/CD, Jenkins, MongoDB, PostgreSQL, Git, GitHub

EDUCATION

Higher Institute of Computer Science and Multimedia of Sfax – Sfax, Tunisia *June 2019*
National Engineering Degree in Applied Sciences and Technologies

Higher Institute of Computer Science and Multimedia of Sfax – Sfax, Tunisia *June 2016*
National Bachelor's Degree in Fundamental Sciences

LEADERSHIP & COMMUNITY

Co-Organizer – GDG Sfax (Google Developer Group) *September 2016 – December 2019*

- Co-organized monthly meetups and workshops for 50+ members, coordinating speakers and topics on web development, mobile apps, and emerging technologies.

LANGUAGES

English (Fluent), French (Bilingual), Arabic (Native)
